

Adrian Salvador Ekomo

Data Engineering & BI Student — Data Warehousing · Analytics Engineering · ML System Deployment

📍 Tunis, Tunisia • ✉️ adriansalvadorekomo@outlook.com • 🗣️ [adriansalvadorekomo](#) • 🌐 [Adrian Salvador Ekomo](#)

Professional Summary

Computer Engineering student at Esprit School of Engineering, specializing in Data Engineering and Business Intelligence. Experienced in designing dimensional data warehouses, building **ETL/ELT** pipelines with **Airflow** and **dbt**, developing analytical dashboards in **Power BI** and Metabase, and deploying ML models with MLOps practices using **MLflow**. Seeking opportunities to apply data modeling, dimensional modeling, and analytics engineering skills to drive data-driven decision making.

Education

Esprit School of Engineering — Sept 2022 – June 2027, Engineering (PABI — Business Intelligence) in

Computer Science – Tunis, Tunisia

- Specialized in Data Engineering, Business Intelligence, and Applied Machine Learning

Projects

Event Analytics Platform

Jan 2026 – May 2026

End-to-end event analytics platform built during an academic project, featuring a star-schema data warehouse, **ETL** pipelines, ML models for forecasting and anomaly detection, NL-to-**SQL** query interface, and containerized microservice architecture.

- Designed a star-schema dimensional data warehouse in **PostgreSQL** and orchestrated **ETL** pipelines with **Airflow**, centralizing event, booking, and marketing data from multiple sources to enable consistent cross-functional analysis and BI reporting
- Developed and integrated ML models for demand forecasting, pricing, and anomaly detection using Prophet, statsmodels, and scikit-learn, managing the model lifecycle with **MLflow** and enabling analytical queries through a natural-language-to-**SQL** interface
- Containerized 11 microservices with **Docker**, implemented real-time monitoring dashboards, and automated ML retraining pipelines to reduce manual deployment effort

Environmental Monitoring AI

Mar 2026 – Mar 2026

AI-powered environmental monitoring platform developed during a national innovation hackathon, integrating satellite image segmentation, time-series forecasting, air quality prediction, and a multilingual chatbot interface.

- Deployed satellite segmentation models on multispectral imagery using **PyTorch** to classify soil contamination and detect water turbidity for real-time environmental monitoring
- Built time-series forecasting and classification models with scikit-learn to predict contamination trends and air quality levels, delivering actionable environmental intelligence
- Developed a real-time API dashboard and a multilingual voice-enabled assistant for intuitive access to environmental monitoring data

DataOps Data Platform

Apr 2026 – present

Data platform project integrating automated **dbt** transformation pipelines, ML models for business forecasting, and a **RAG**-based natural-language query assistant. In progress.

- Designed automated **dbt** transformation pipelines and deployed ML models for sales forecasting and churn prediction using **PyTorch**, tracking experiments and model versions with **MLflow**
- Built a **RAG**-based assistant enabling natural-language querying of business data stored in **PostgreSQL**

HR Workforce Analytics

Nov 2025 – Dec 2025

Snowflake-schema **Data Warehouse** and **Power BI** solution for self-service HR workforce analytics.

- Designed a Snowflake-schema dimensional data warehouse and built **ETL** pipelines consolidating HR data from multiple systems, enabling self-service workforce analytics for HR stakeholders
- Developed interactive **Power BI** dashboards delivering actionable headcount, turnover, and demographic insights

Skills

Data Engineering: SQL, PostgreSQL, Talend, Airbyte, **Airflow**, ETL/ELT, Data Warehousing, Data Modeling, Dimensional Modeling

Analytics & BI Engineering: dbt, Power BI, Metabase, Prometheus, Grafana

ML/DL Model Integration & MLOps: Scikit-learn, statsmodels, **PyTorch**, **MLflow**, **RAG**, NLP-to-**SQL**, Time-Series Forecasting, Clustering, Anomaly Detection

Backend & DevOps: FastAPI, REST APIs, **Docker**, Linux, n8n

Programming Languages: Python, R, Java, JavaScript/TypeScript, C

Languages

Spanish: Native — Full professional proficiency

English: B2 — Read ML/AI papers, write technical docs

French: B2 — Read technical papers, write documentation

German: A1 — Beginner (elementary reading and simple phrases)
